Swapna Kartha Chandran, M.D.

Assistant Professor of Surgery, Division of Otolaryngologic Surgery, Univ. of
Louisville

“Vocal Fold Paralysis”

1. Which of the following intrinsic muscles of the larynx are NOT supplied by the Recurrent Laryngeal Nerve?
 - a. Thyroarytenoid
 - b. Posterior Cricoarytenoid
 - c. **Cricothyroid**
 - d. Lateral Cricoarytenoid

2. Why has Teflon lost popularity in treating glottic incompetence?
 - a. Costs too much
 - b. Inflammatory Reaction
 - c. Embolization potential
 - d. A nd B
 - e. **B and C**

3. What is the primary role of EMG in vocal fold immobility?
 - a. Differentiate between vocal fold paralysis and arytenoid dislocation
 - b. Reinnervate the recurrent laryngeal nerve
 - c. **Provide information on the prognosis of vocal fold immobility**
 - d. Allow for concurrent injection medicalization of the vocal fold

4. Name two methods of differentiating vocal fold paralysis from arytenoid ankylosis/fixation in the setting of unilateral vocal fold immobility?
 - a. EMG and laryngoscopy
 - b. **EMG and laryngoscopy with palpation**
 - c. Laryngoscopy and computed voice analysis
 - d. Computed Voice analysis and CT scan
